CLAIMS

REPLACED BY  
ART 34 AMDT

80/527027

1. A sealing apparatus comprising:
  - an attachment portion attached to one member of two members that are arranged to be relatively movable;
  - a sealing lip extending from the attachment portion to the other member to be slidably in sealing contact with the other member; and
  - a dust lip extending to the other member to be slidably in contact with the other member while being tilted toward the open-air side from said attachment portion on the open-air side of the sealing lip,wherein said sealing lip is provided to have an inner side contact angle which is an angle not smaller than an open-air side contact angle.
2. A sealing apparatus according to claim 1, wherein said sealing lip has an extending direction that is tilted not less to the open-air side than the middle of the inner side and the open-air side.
3. A sealing apparatus according to claim 1 or 2, wherein said dust lip is a double seal having two parts.
4. A sealing apparatus according to claim 1, 2, or 3, wherein said sealing lip has the inner side contact angle which is substantially equal to the open-air side contact

angle, has the extending direction which is substantially the middle of the inner side and the open-air side, and has a sectional shape which is symmetric relative to the line of the extending direction.
